At approximately age 18 to 19 significant numbers of Islanders leave to go to university or employment, the out-migration continues for the age groups up until age 35 when inwards migration (mainly from the rest of England) outnumbers departures. This group 19 to 35 are the prime years for reproduction and consequently the under 10's are proportionally fewer than is the case nationally.

Inward migration in the age-band 35 to 50 increase both those age groups and the proportion of their teenage offspring to close to the national profile.

Proportionally inward migration continues across the age-bands 50 to 70 to give us a significantly higher proportion of retirees.
