Dataset Number	Dataset
1.	Limiting Long-Term Illness (2001 Census).
2.	Limiting Long-Term Illness - Projections.
3.	Long-Term Conditions Projections - All Ages
4.	Long-Term Conditions Projections - age 65+
5.	Estimated projections of selected Long-Term Conditions
6.	Estimates vs GP Recording of selected Long Term Conditions

Domain: Health and Wellbeing Status
Indicator: Long-Term Conditions

Note:

Long-Term Conditions (LTCs) are defined by the Department of Health as:

"Conditions that cannot be cured but can be managed through medication and/or therapy."

Conditions generally counted as LTCs include asthma, chronic obstructive pulmonary disease (COPD), coronary heart disease, dementia, diabetes, muscular-skeletal conditions, severe mental health conditions and neurological diseases such as Parkinson's Disease.

Within this file 2 separate datasets are shown:

- **Limiting Long-Term Illness** is used as a proxy for the presence of at least 1 Long-Term Condition.

The datasets shown are based on self-reported **local** data from the 2001 Census, about the presence of a "*long-term illness, health problem or disability*", applied to population projections for the IW.

- The **Long-Term Conditions** datasets are based on a national Department of Health model which uses self-reported **national** data from the General Lifestyle Survey, about the presence of a "*long-standing illness, disability or infirmity*" in private households (i.e. excluding Communal Establishments such as care homes). This model is applied to population projections for the IW. See the accompanying briefing note for a more comprehensive explanation of the model and methodology.

The 2 datasets are therefore based on similar but not identical underlying data, each applied to the same population projections for the IW.

Isle of Wight: Number and % of People with Limiting Long-Term Illness (LLTI)

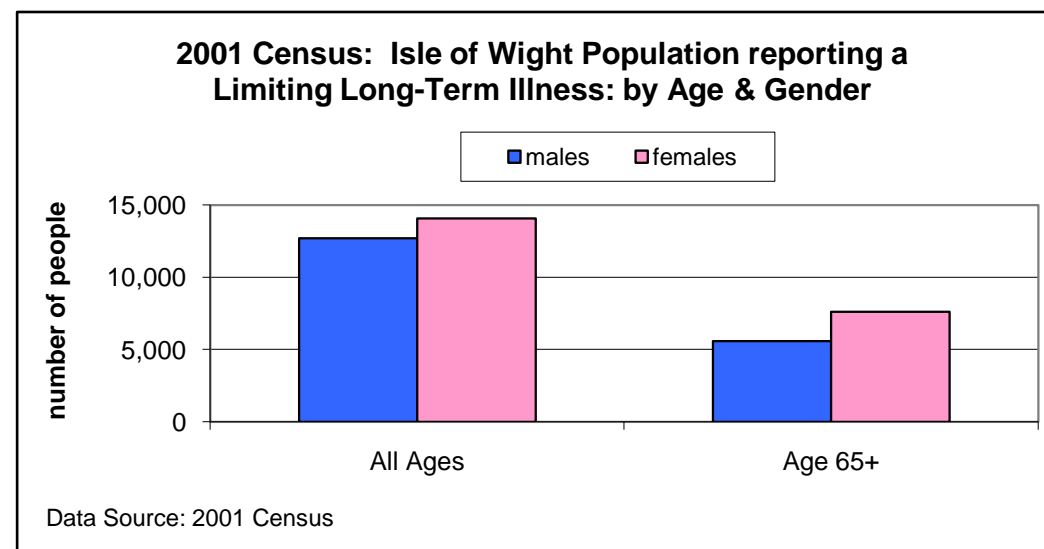

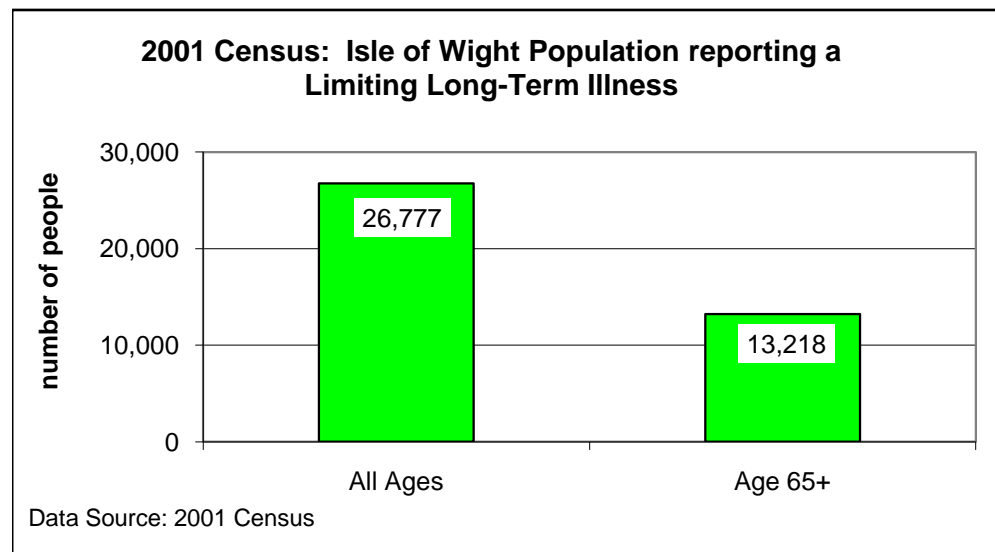

All Ages

Gender	Total Population - All Ages	Limiting Long-Term Illness		
		Yes	No	% with LLTI
All people	128,650	26,777	101,873	20.8%
Males	61,367	12,707	48,660	20.7%
Females	67,283	14,070	53,213	20.9%

Age 65+

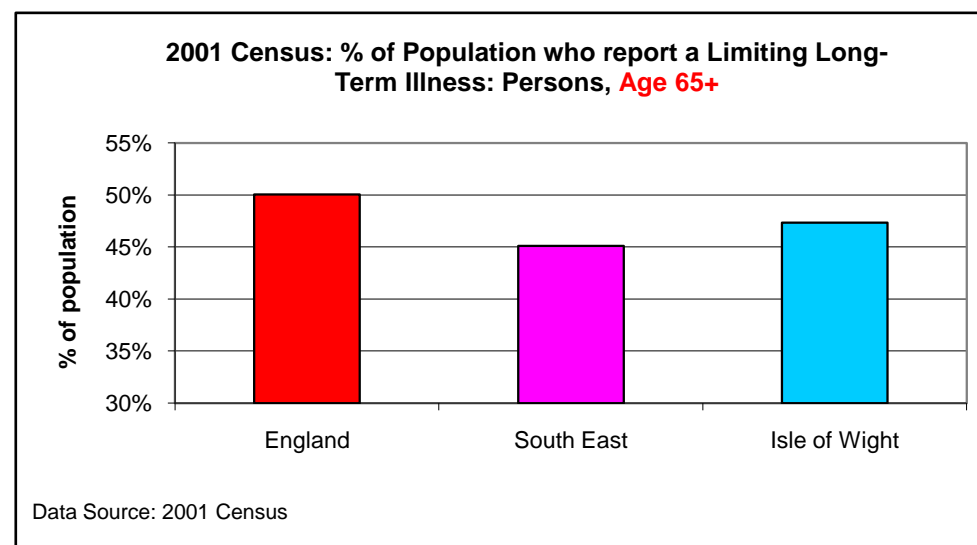

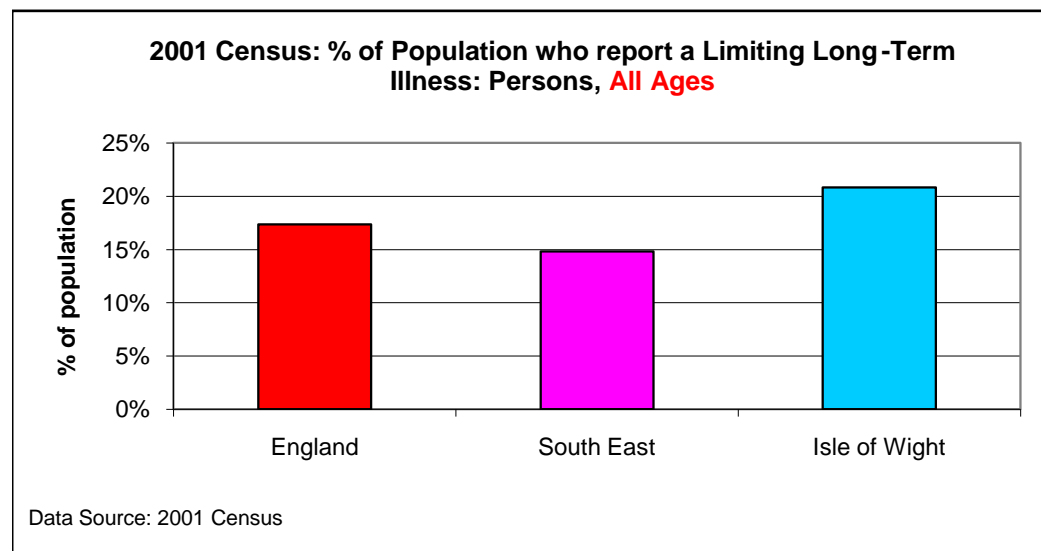

Gender	Total Population - Age 65+	Limiting Long-Term Illness		
		Yes	No	% with LLTI
All people	27,911	13,218	14,693	47.4%
Males	11,688	5,596	6,092	47.9%
Females	16,223	7,622	8,601	47.0%

NB: 'total population' shows the number of people who responded to this question.

% of People with Limiting Long-Term Illness (LLTI): Isle of Wight compared with England and the South-East Region

	All Ages	Age 65+
England	17.3%	50.1%
South East	14.8%	45.1%
Isle of Wight	20.8%	47.4%

Isle of Wight Joint Strategic Needs Assessment - 2011
Long-Term Conditions

INDICATOR DEFINITION	
Indicator:	Limiting Long-Term Illness
Definition:	People self-reporting a long-term illness, health problem or disability which limited their daily activities or the work they could do. <i>NB: Limiting Long-Term Illness is often used as a proxy for the presence of 1 or more Long-Term Conditions.</i>
Numerator (number of people or events)	Number of people who answered 'yes' to a 2001 Census question about whether they had any long-term illness, health problem or disability which limited their daily activities or the work they could do.
Denominator (total population or)	Resident population for the specified years. All Ages by Gender
Geographic	Local Authority
Time period	2001 Census (most recent dataset available)
Data Source(s)	Office for National Statistics via NOMIS http://www.nomisweb.co.uk/home/census2001.asp
Significance for Health	Higher rates are associated with worse health. Lower rates are associated with better health.
Factors that might affect the Accuracy of this Indicator	The 2001 Census is now relatively out of date and might not be an accurate predictor of the current situation. The data shown above does not take account of the population gender and age profile of the areas compared. Since LLTI is more common among older people, All Age prevalence is likely to be higher in areas such as the IW with older populations.

INDICATOR DEFINITION	
Indicator:	Limiting Long-Term Illness - Projections
Definition:	People self-reporting a long-term illness, health problem or disability which limited their daily activities or the work they could do.
Numerator (number of people or events)	Projected number of people with an LLTI, based on answers of 'yes' to a 2001 Census question about whether they had any long-term illness, health problem or disability which limited their daily activities or the work they could do. NB: calculations are based on a detailed breakdown of the IW Census data by gender and the 5-year age groups shown above.
Denominator (total population or events)	Population projections by gender and age for the specified years.
Geographic Coverage	Local Authority
Time period	2011 - 2033 <i>(period for which Local Authority population projections are currently available)</i>
Data Source(s)	LLTI data: Office for National Statistics via NOMIS http://www.nomisweb.co.uk/home/census2001.asp Population projections: Office for National Statistics 2008-Based Sub-National Population Projections (most recent available) http://www.ons.gov.uk/ons/rel/snpp/sub-national-population-projections/2008--based-projections/index.html
Significance for Health	Higher rates are associated with worse health. Lower rates are associated with better health.
Factors that might affect the Accuracy of this Indicator	The 2001 Census is now relatively out of date and might not be an accurate predictor of the current situation. These projections are based on an assumption that 2001 Census findings will be sustained over the period for which these projections are made, which might not be the case, particularly in the latter part of the period.

Isle of Wight Joint Strategic Needs Assessment:

2011

Domain: Health and Wellbeing Status
 Sub-Domain: Long-Term Conditions
 Indicator: Long-Term Conditions - Projections
All Ages

Data Source: Department of Health model applied to
 ONS 2008-Based Population Projections for the IW

Indicator definition: [see below](#)

**Isle of Wight: Projected Number of People with 1 or more Long-Term Conditions by Residence
All Ages**

IW Population with at least 1 LTC: All Ages	2011	2012	2013	2014	2015	2016	2017	2018	% change 2011-2018
private households	44,873	45,105	45,476	45,828	45,927	46,239	46,583	46,927	-(4.6%)
communal establishments	2,914	2,971	3,023	3,103	3,120	3,204	3,274	3,314	-(13.7%)
Total	47,787	48,076	48,499	48,931	49,047	49,443	49,857	50,241	-(5.1%)
% resident in communal establishments	6.1%	6.2%	6.2%	6.3%	6.4%	6.5%	6.6%	6.6%	

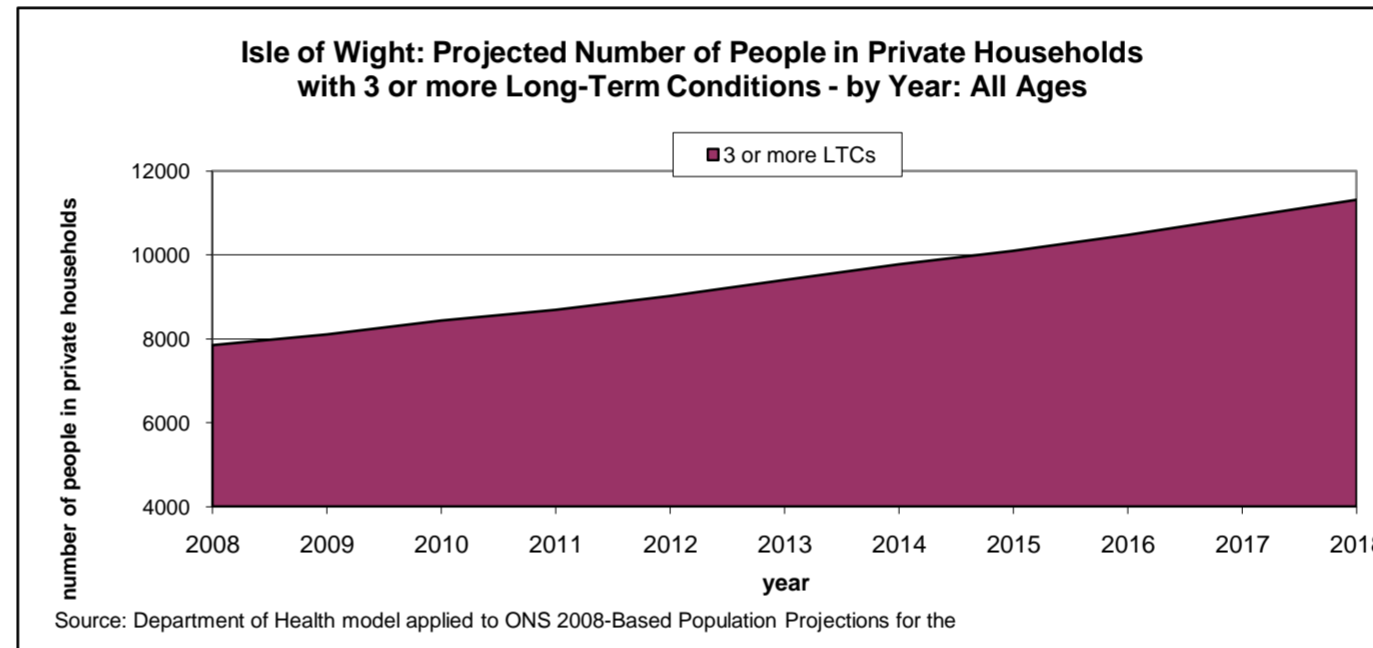

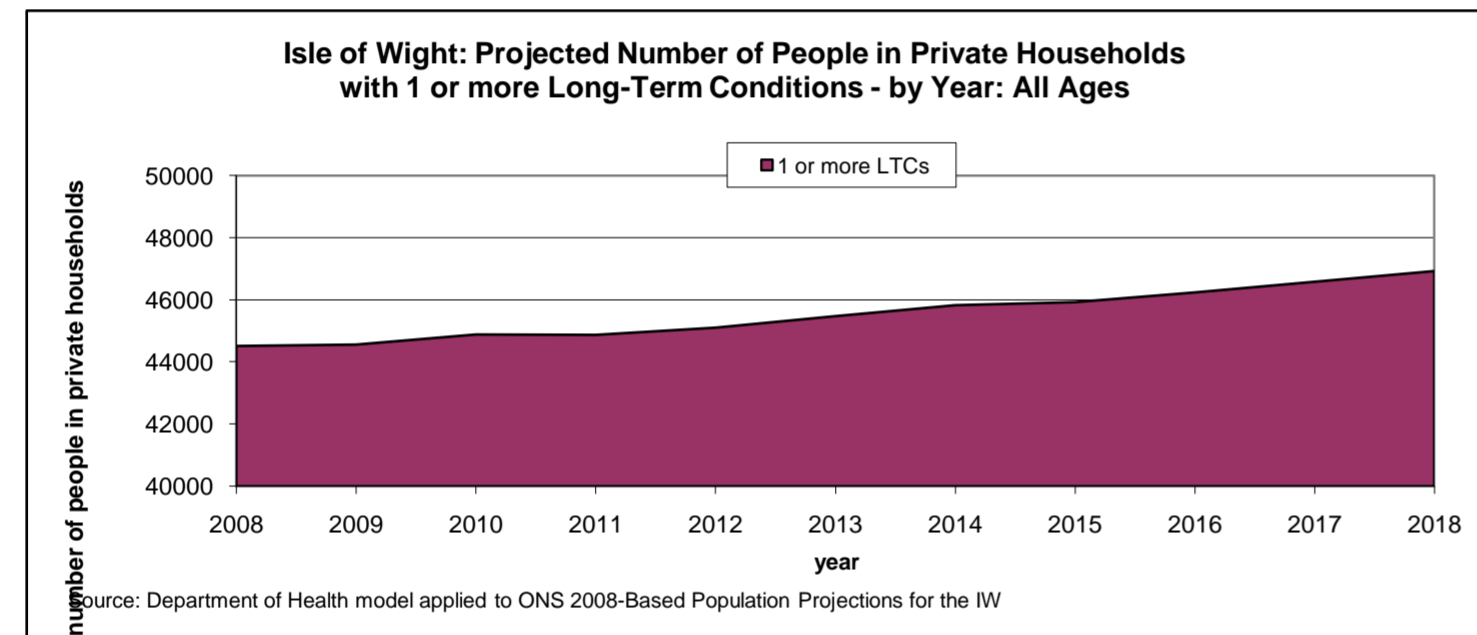

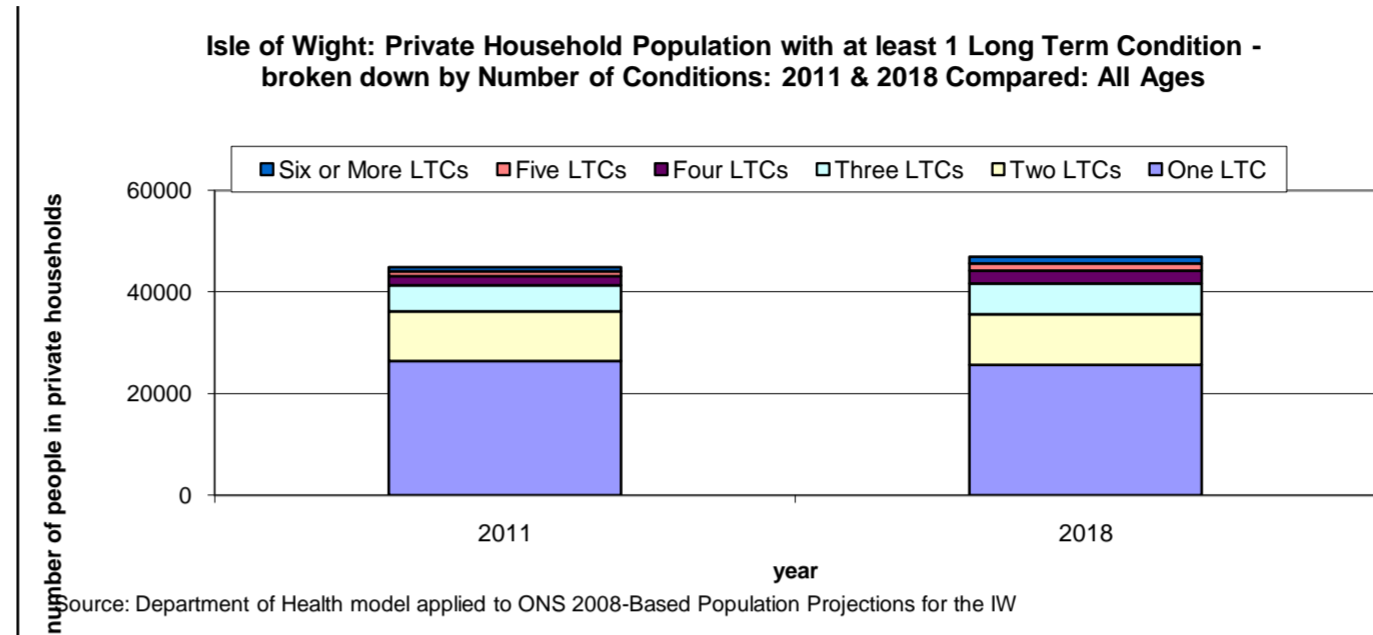

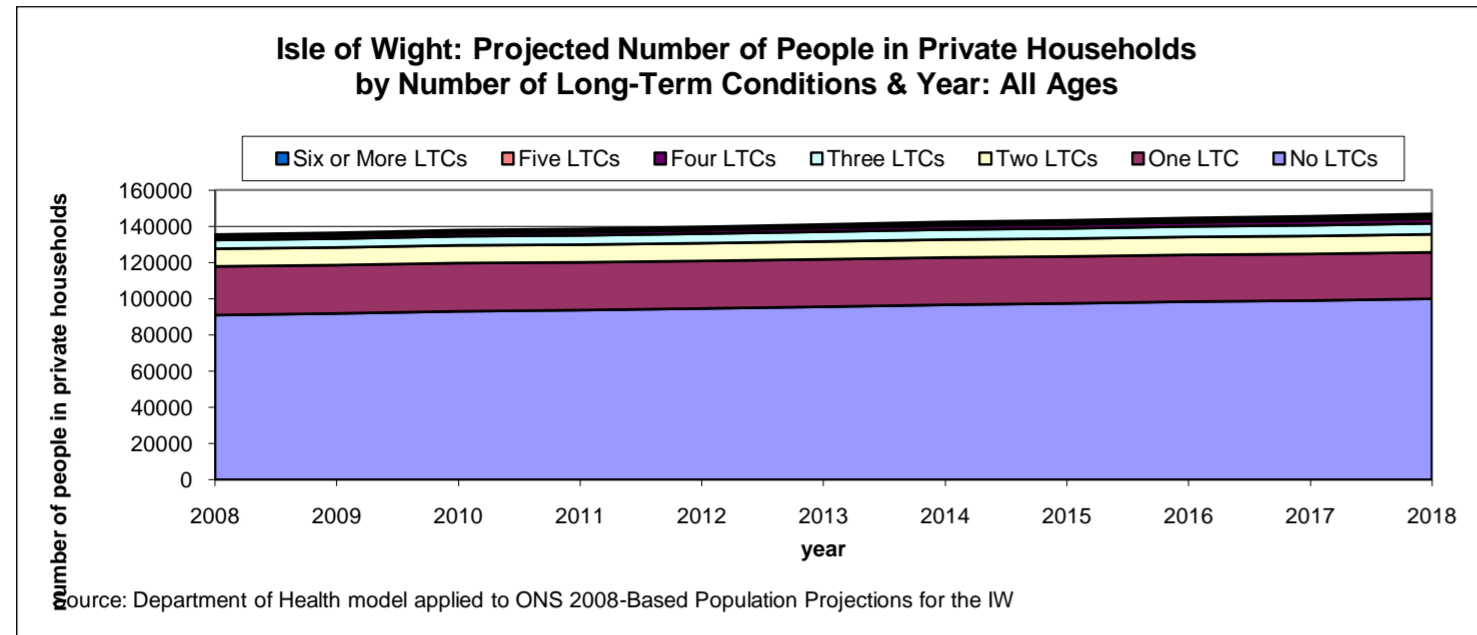

NB: the Department of Health model used to calculate the more detailed projections below applies only to people resident in Private Households (i.e. not Communal Establishments such as Care Homes).
 However over 96% of the IW population are resident in Private Households, and the majority of people with 1 or more Long Term Conditions live in Private Households (as shown above), so these figures provide a reasonably comprehensive profile of Long-Term Conditions.

Isle of Wight: Projected Number of People resident in Private Households with 1 or more Long-Term Conditions (LTCs) - by number of LTCs: All Ages

Number of IW Residents in Private Households with:	2011	2012	2013	2014	2015	2016	2017	2018	% change 2011-2018
No LTCs	93,736	94,633	95,598	96,654	97,434	98,424	99,012	100,009	-(6.7%)
One LTC	26,408	26,280	26,213	26,148	25,949	25,857	25,744	25,649	2.9%
Two LTCs	9,776	9,805	9,862	9,906	9,883	9,909	9,945	9,966	-(1.9%)
Three LTCs	5,124	5,249	5,400	5,537	5,642	5,768	5,911	6,048	-(18.0%)
Four LTCs	1,805	1,894	1,994	2,097	2,184	2,293	2,413	2,530	-(40.2%)
Five LTCs	948	1,004	1,069	1,133	1,196	1,265	1,341	1,420	-(49.8%)
Six or More LTCs	813	871	938	1,006	1,072	1,147	1,229	1,315	-(61.8%)
Total Residents in Private Households	138,609	139,738	141,074	142,482	143,361	144,664	145,595	146,937	-(6.0%)

Cumulative Numbers of Long-Term Conditions

Number of IW Residents in Private Households with:	2011	2012	2013	2014	2015	2016	2017	2018	% change 2011-2018
No LTCs	93,736	94,633	95,598	96,654	97,434	98,424	99,012	100,009	-(6.7%)

2 or more LTCs	18,465	18,825	19,263	19,680	19,978	20,383	20,839	21,278	-(15.2%)
3 or more LTCs	8,689	9,019	9,401	9,774	10,095	10,474	10,894	11,312	-(30.2%)
4 or more LTCs	3,565	3,770	4,001	4,237	4,453	4,706	4,983	5,265	-(47.7%)
5 or more LTCs	1,761	1,876	2,007	2,140	2,269	2,412	2,570	2,735	-(55.4%)
6 or more LTCs	813	871	938	1,006	1,072	1,147	1,229	1,315	-(61.8%)

INDICATOR DEFINITION	
Indicator:	Long-Term Conditions - Projections
Definition:	People self-reporting any long-standing illness, disability or infirmity, which has affected or is likely to affect a person over a period of time.
Numerator (number of people or events)	Projected number of people of All Ages with a Long-Term Condition, based on applying a national model using national General Lifestyle Survey data. NB: calculations are based on detailed projections for the IW using population projections by gender and 5-year age groups.
Denominator (total population or events)	Population projections by gender and age for the specified years - All Ages
Geographic Coverage	Local Authority
Time period	2011 - 2018 <i>(period for which the Department of Health model is available)</i>
Data Source(s)	LTC prevalence data: Calculated locally using Department of Health model. Population projections: Office for National Statistics 2008-Based Sub-National Population Projections (most recent available) http://www.ons.gov.uk/ons/rel/snpp/sub-national-population-projections/2008--based-projections/index.html
Significance for Health	Higher rates of LTCs are associated with worse health. Lower rates of LTCs are associated with better health.
Factors that might affect the Accuracy of this Indicator	The Department of Health model is based on an assumption that national trends in the prevalence of LTCs will be sustained until 2018, which might not be the case. The IW data is based on an assumption that the national trend data and the Department of Health model are also applicable to the IW population, which might not be the case.

INDICATOR DEFINITION	
Indicator:	Long-Term Conditions - Projections
Definition:	People self-reporting any long-standing illness, disability or infirmity, which has affected or is likely to affect a person over a period of time.
Numerator (number of people or events)	Projected number of people aged 65+ with a Long-Term Condition, based on applying a national model using national General Lifestyle Survey data. NB: calculations are based on detailed projections for the IW using population projections by gender and 5-year age groups.
Denominator (total population or events)	Population projections by gender and age for the specified years - Age 65+
Geographic Coverage	Local Authority
Time period	2011 - 2018 <i>(period for which the Department of Health model is available)</i>
Data Source(s)	LTC prevalence data: Calculated locally using Department of Health model. Population projections: Office for National Statistics 2008-Based Sub-National Population Projections (most recent available) http://www.ons.gov.uk/ons/rel/snpp/sub-national-population-projections/2008--based-projections/index.html
Significance for Health	Higher rates of LTCs are associated with worse health. Lower rates of LTCs are associated with better health.
Factors that might affect the Accuracy of this Indicator	The Department of Health model is based on an assumption that national trends in the prevalence of LTCs will be sustained until 2018, which might not be the case. The IW data is based on an assumption that the national trend data and the Department of Health model are also applicable to the IW population, which might not be the case.

Isle of Wight Joint Strategic Needs Assessment:

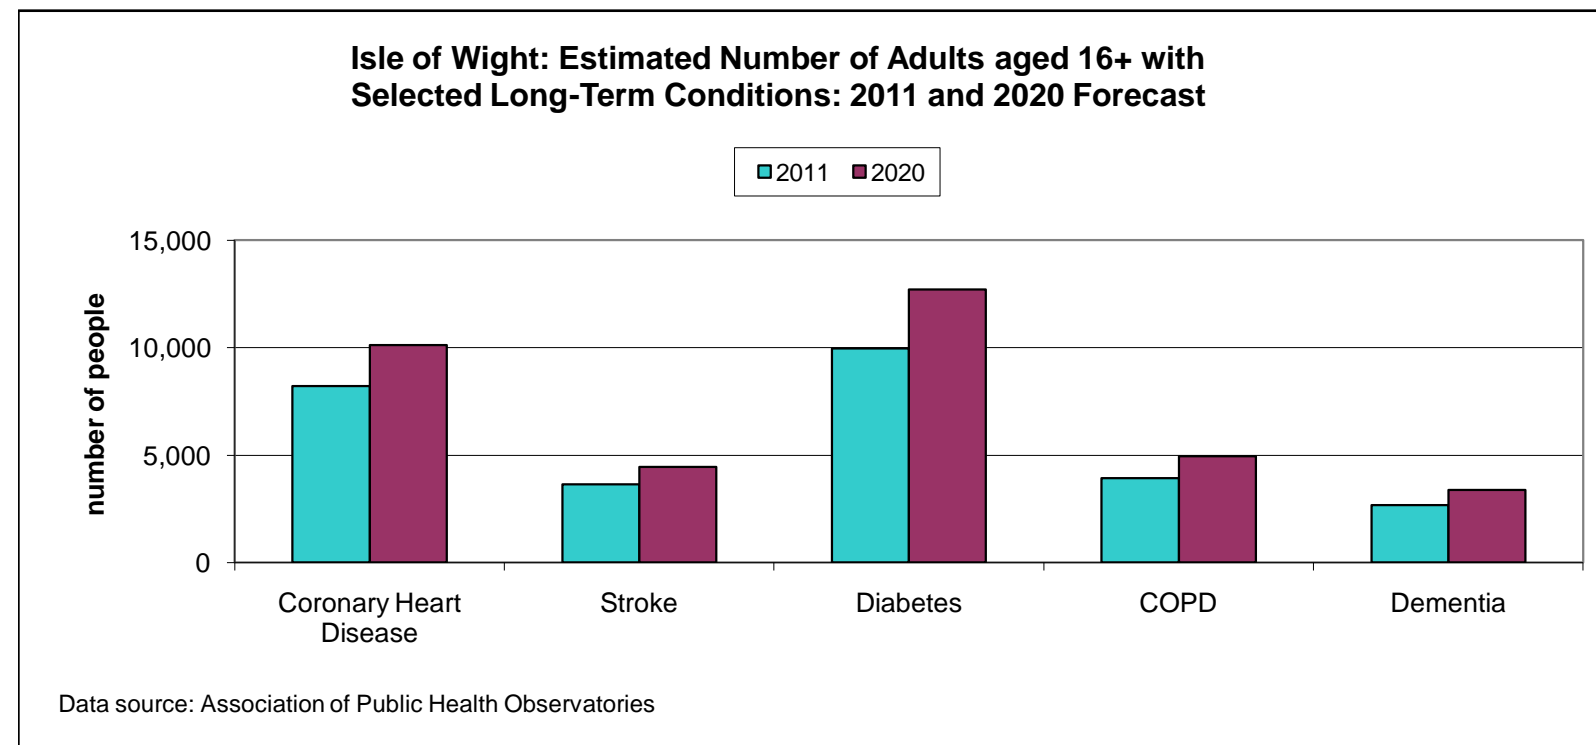

2011

Domain: Health and Wellbeing Status
Sub-Domain: Long-Term Conditions
Indicator: Selected Long-Term Conditions:
Estimates and Projections

Data Source: Association of Public Health Observatories
Indicator definition: [see below](#)

Isle of Wight: Estimates and Projections of selected Long-Term Conditions

Long Term Condition	estimated number of IW residents		% increase
	2011	2020	
Coronary Heart Disease	8,222	10,124	-(23.1%)
Stroke	3,643	4,448	-(22.1%)
Diabetes	9,954	12,703	-(27.6%)
COPD	3,933	4,937	-(25.5%)
Dementia	2,669	3,384	-(26.8%)

INDICATOR DEFINITION	
Indicator:	Selected Long-Term Conditions: Estimates and Projections
Definition:	Estimated number of people in the population with selected Long-Term Conditions
Numerator (number of people or events)	Estimated number of people with selected Long-Term Conditions
Denominator (total population or events)	Resident population for the specified years.
Geographic Coverage	Local Authority
Time period	2011 and 2020
Data Source(s)	Association of Public Health Observatories http://www.apho.org.uk/resource/view.aspx?RID=48308
Significance for Health	Higher rates of LTCs are associated with worse health. Lower rates of LTCs are associated with better health.
Factors that might affect the Accuracy of this Indicator	These estimates are based on applying national prevalence models to local area populations, and do not take account of any local factors which might affect the true prevalence in the population.

Isle of Wight Joint Strategic Needs Assessment:

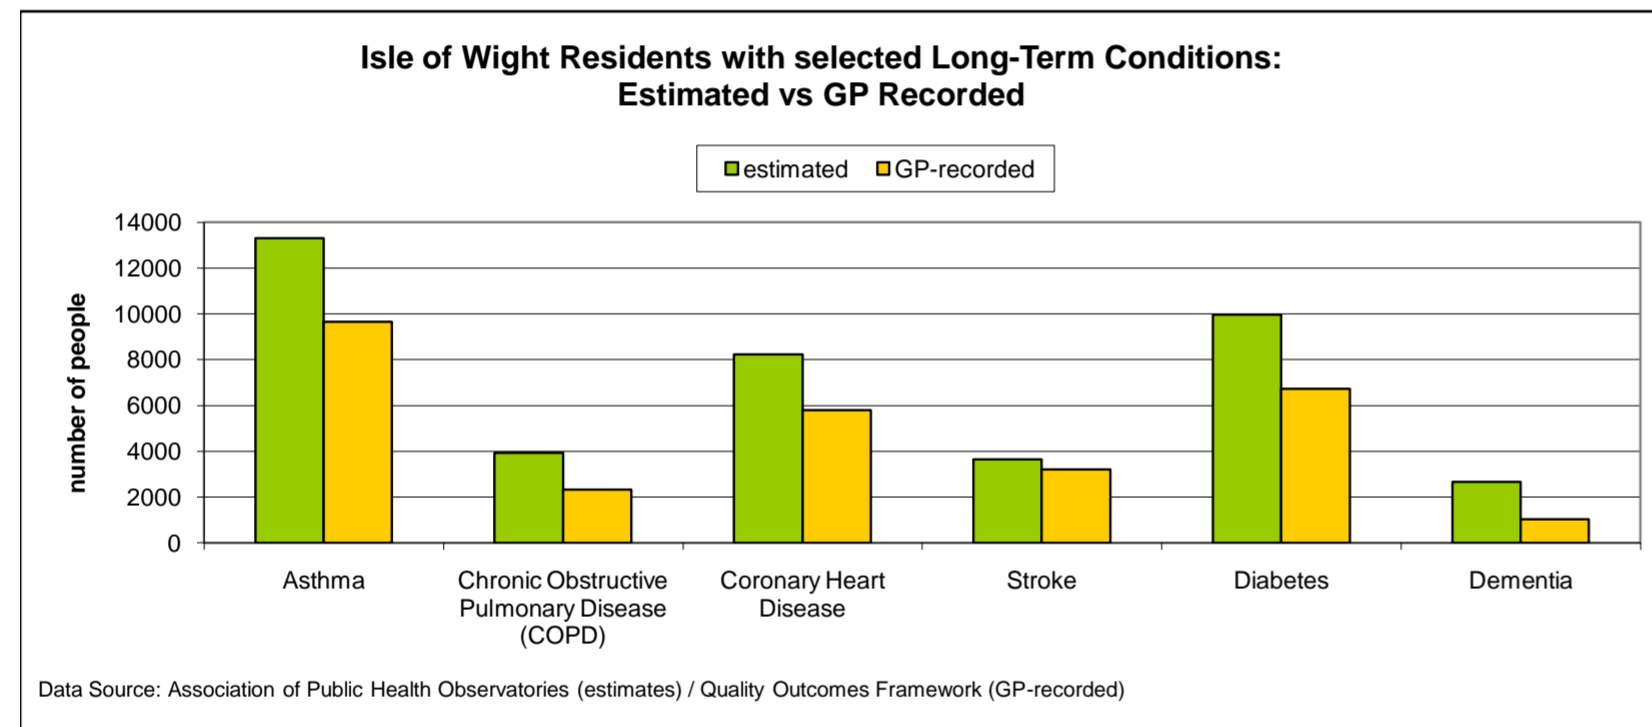

2011

Domain: Health and Wellbeing Status
Sub-Domain: Long-Term Conditions
Indicator: Selected Long-Term Conditions: Estimates vs GP Recorded

Data Sources: Association of Public Health Observatories (estimated)
Quality Outcomes Framework (GP-recorded)
Indicator definition: [see below](#)

Isle of Wight: Estimated vs GP-Recorded Number of People with selected Long-Term Conditions

Long-Term Condition	Estimated Number of People with Condition	GP-Recorded Number of People with Condition	'Gap' (people undiagnosed or unrecorded)	'Gap' as % of Estimated Number of People with Condition
Asthma	13,305	9,645	3,660	28%
Chronic Obstructive Pulmonary Disease (COPD)	3,933	2,326	1,807	44%
Coronary Heart Disease	8,222	5,794	2,429	30%
Stroke	3,643	3,217	385	11%
Hypertension (high blood pressure)	43,043	23,309	20,646	47%
Diabetes	9,954	6,719	3,235	33%
Dementia	2,669	1,047	1,622	61%

INDICATOR DEFINITION	
Indicator:	Selected Long-Term Conditions: Estimates and GP-Recording
Definition:	Estimated number of people in the population with selected Long-Term Conditions, vs GP recording of those conditions
Numerator (number of people or events)	Estimated / GP-recorded number of people with selected Long-Term Conditions
Denominator (total population or events)	Resident population for the specified years.
Geographic Coverage	Primary Care Trust
Time period	2011
Data Source(s)	Estimated data: Association of Public Health Observatories http://www.apho.org.uk/resource/view.aspx?RID=48308 GP-recorded data: Quality Outcomes Framework http://www.ic.nhs.uk/statistics-and-data-collections/audits-and-performance/the-quality-and-outcomes-framework
Significance for Health	Lower rates of recording mean that people might not be receiving sufficient support and intervention to maintain their health and prevent deterioration.
Factors that might affect the Accuracy of this Indicator	The estimates are based on applying national prevalence models to local area populations, and do not take account of any local factors which might affect the true prevalence in the population.
